Professional Summary

Senior Fullstack Engineer with 7 years building secure, accessible web platforms across SaaS and fintech — from banking systems (PCI DSS) to accessibility work on Google Search. Experienced across the React ecosystem (Next.js, TypeScript) and backends (Node.js, Java, Python, GraphQL, gRPC), with a growing focus on delivering with AI (AI-assisted development and AI/LLM integration). I work close to product — owning frontend architecture, weighing cost and scalability trade-offs, and partnering with founders and stakeholders, not just shipping code.

Skills

- **Frontend:** React.js, Next.js (SSR/ISR), Vite, TypeScript, JavaScript (ES6+), Redux, React Hook Form, Tailwind CSS, shadcn/ui, Storybook, Responsive Design, Cross-browser Compatibility, Performance Optimization (code splitting, lazy loading), Web Accessibility (WCAG 2.1/2.2 AA, ARIA)
- **Backend & APIs:** Node.js, Express, Java, Python, FastAPI, Django, REST, GraphQL, gRPC, WebSockets, JWT
- **Data & CMS:** PostgreSQL, MongoDB, Prisma, Contentstack (Headless CMS), RealmDB
- **Cloud & Infra:** AWS (EC2, S3, RDS, Lambda), GCP, Vercel, On-premise/Hybrid, Docker
- **CI/CD & Version Control:** GitHub, GitLab, Bitbucket, GitHub Actions, GitLab CI, Jenkins, CircleCI
- **Testing & Practices:** Jest, Cypress, React Testing Library, Playwright, Test Automation, Code Review, Agile/Scrum, A/B Testing & Feature Flags (PostHog, Amplitude)
- **AI & Agentic Development:** AI-Assisted Development, Multi-Agent Workflows, LLM / AI API Integration, Prompt Engineering, Agentic Tooling (Claude Code, Cursor)

Professional Experience

Senior Software Engineer — Google (via Qualitest)

09/2025 – 03/2026

- Resolved 50+ high-priority Web Accessibility defects (WCAG 2.1/2.2 AA, ARIA) directly on Google Search, improving compliance and inclusivity for one of the world's highest-traffic products.
- Ran accessibility audits and shipped UI remediations through large-scale code review, partnering with product and design teams to define and validate fixes — accelerating delivery with AI coding assistants and AI-assisted test generation.
- Built backend service communication in Java with gRPC, integrating frontend components into Google's proprietary internal infrastructure.

Frontend Lead — Pandora's Way (Part-time)

02/2025 – 12/2025

- Sole frontend owner for the investor-facing beta of an early-stage parenting app (in the space of Good Inside) — partnered directly with the 3 founders, turned wireframes into a shipped product, and drove architecture, cost, scalability, and bundle-size decisions under tight startup constraints.
- Built core user flows (onboarding, profiles, content modules) and a scalable UI component system with React, Vite, Node.js, Tailwind CSS, and shadcn/ui — cut initial bundle size by ~70% through lazy loading, code splitting, and a Vite-based build for a fast, lean beta.
- Contributed to the Python/Django backend (storage/bucket layer) and helped shape business rules alongside the technical founder.
- Integrated PostHog (feature flags + analytics) for progressive rollouts, set up Jest/Cypress testing and CI/CD, and worked hands-on with product and the founders in an agile team.

Senior Frontend Engineer — Unosquare

06/2024 – 08/2025 · Enterprise clients: *Stitch Fix*, *Life.Church*

- **Stitch Fix** (e-commerce platform, 2.3M+ active clients): led the frontend refactor with GraphQL and migrated content architecture to Contentstack (Headless CMS), driving a 25% increase in user engagement.
- **Life.Church**: directed a full frontend redesign in Tailwind CSS and shadcn/ui, building a 20+ component library documented in Storybook and shipped via Vercel.
- Ran data-driven A/B testing (Amplitude) for a 15% conversion lift, optimized rendering performance on high-traffic Next.js apps, and maintained 85%+ test coverage with Jest, React Testing Library, and Playwright, accelerated by AI-assisted development and test generation.

Senior Fintech Consultant — Invex Bank & Compartamos Bank

05/2023 – 05/2024

- **Invex Bank**: led a legacy migration to micro-frontends serving 50,000+ customers — 15+ React/TypeScript widgets with strict PCI DSS compliance and secure Node.js + PostgreSQL + JWT APIs on the bank's on-premise/hybrid infrastructure.
- **Compartamos Banco** (one of LatAm's largest microfinance banks — 3.1M+ clients): engineered an offline-first financial-inclusion platform (React Native + encrypted RealmDB) with high-concurrency Java backends in hexagonal architecture, containerized with Docker.

Frontend Tech Lead — Fondeadora for Business

05/2021 – 05/2023

- Engineered a B2B fintech platform from the ground up with React and Redux, scaling to 5,000+ business customers.
- Built a comprehensive 8-module admin panel (React Hook Form) with role-based access control (RBAC), transaction history, and digital card management.
- Implemented a real-time payment system handling \$1M+ in monthly transactions via WebSockets, with MongoDB for flexible storage.
- Led and mentored a 3-engineer team while optimizing Docker + GitHub Actions CI/CD pipelines that cut deploy time by 40%.

Frontend Developer — ProsperIA

02/2019 – 05/2021

- Designed and built an AI-powered medical MVP (React + Python) to support ophthalmologist diagnosis workflows.
- Integrated AI APIs processing 1GB+ of medical imagery, improving pipeline performance and scalability by 50%.

Education

Bachelor's in Computer Engineering — Universidad de América del Norte

Certifications

- React Advanced Patterns
- Node.js Application Security
- UX/UI Design — DEV.F

Languages

- Spanish — Native · English — C1 Professional
